

Re: Android App for resetting/writing blank ntags

hi there the app is getting better and better great job to everybody involve. i would just like to know if the app says tag status locked is there a way to unlock the tag, to write to it again and swap with a friend to use in his machine.

I used the Ntag Edit Tool v1.30 for PC, in which I entered the required length, and I wrote rows 14-17 and then I transcribed the lines 14-17 on the label over the RFID NFC in my mobile, the other rows I have identical.

Re: Android App for resetting/writing blank ntags

modfreakz thank so much for your software !

I have a question.

When I try to refill tag, nfc tag do't work anymore.

I tryed with 200m, 300m but printer say: "Undefined spool".

I also tryed to "generate tag" over existing tag. Same result "Undefined spool"

I consume many nfc tags...

Can this issue be solved by formatting nfc tag?
